

OUR MISSION

To protect damaged and exposed buildings with roof and enclosure systems that actually hold, so agencies, institutions, and the people they serve stay dry, safe, and operating while they recover and rebuild.

We exist because the blue tarp fails. A 90-day product on a 12-month problem costs the owner repeat mobilizations, interior damage, and lost use of the facility. We engineered a membrane, an attachment system, and a crew model that seal a building once and keep it sealed until the permanent roof is on.

WHAT WE STAND FOR

- **The product has to perform.** When the storm hits, the protection holds. Reliability is the entire promise.
- **Protect people when they are most vulnerable.** Our customers call after a disaster. We treat that moment with the seriousness it deserves.
- **Engineer, test, document.** Every claim is backed by a test report or a photograph, available to the buyer.
- **Deal straight.** Clear scopes, honest schedules, and a named point of contact who answers the phone.
- **Make it here.** Elastowrap is a domestic end product made to our own formulation, so the material is there when the forecast turns.

WHO WE ARE

Titanium Tarps LLC was formed in 2023 as the manufacturing and installation company of the Structural Wrap group, founded by Larry Bond, Chris Mouriz, and Spiro Naos. Titanium Tarps LLC and affiliate Structural Wrap LLC operate under common ownership with the same principals, crews, and equipment. The group has protected storm-damaged property since Hurricane Irma in 2017 and has responded to every major Gulf and Atlantic hurricane since. Titanium Tarps holds the federal registration (UEI VZ6EGCGK8416, CAGE 9SZZ2). Day-to-day operations are led by Marcelo Romero, Director of Operations.

HOW TO ENGAGE US

- **Market research and RFIs:** request a requirement-specific capability statement.
- **Open-market RFQs and micro-purchases:** quote within one business day on roof area, condition, duration, and access.
- **Prime contractors:** subcontract installation or supply Elastowrap for temporary roofing and enclosure task orders.
- **State and local agencies:** emergency standby and cooperative purchasing on request.

PRODUCT LINE

PRODUCT	WHAT IT DOES
Elastowrap stretch roof film	12 mil LDPE/LLDPE membrane, Class A ASTM E84, 150 MPH wind resistance (FIU Wall of Wind), 24-month UV package. 32 ft x 90 ft rolls; other sizes on request.
TitanBond seam tape	PE-backed synthetic rubber adhesive, bonds film into one continuous membrane. UL 723 / ASTM E84.
TitanGrip waterproof tape	20 mil grip tape for flashing, patches, penetrations, and vapor barriers. 3 in and 4 in x 100 ft.
TitanVent roof vent	Self-tapping vent that lets a sealed roof breathe without penetrating the structure.
TitanClip attachment clip	Reusable clip that tensions the membrane to the structure with no nails or screws.

AT A GLANCE

Headquarters	1230 NW 57th Ave, Miami, FL 33126
Manufacturing	In-house Elastowrap film production
Installed volume	Over 500,000 sq ft annually; over 1 million sq ft secured to date
Service area	All U.S. states and territories, Puerto Rico, Caribbean
Scale	Single roofs to campus and portfolio-wide mobilizations
Available on request	Wall of Wind test report, ASTM E84 report, spec sheets, W-9, COI, references
